## Grant of Exploration Licence 29/861 - Mt Ida Gold Project 100% Jervois Mining Ltd

In early July 2012, Jervois Mining Limited pegged Exploration Licence 29/861 in the Mt Ida Greenstone Belt. This tenement has now been successfully granted to Jervois, returning the Company to gold exploration.

The Mount Ida Gold Mine is located 86 km north-west of Menzies, Western Australia.

The historical production from Mt Ida was over 290,000 ounces of gold from underground mines, while the nearby Timoni Gold Mine (Copperfield) produced over 260,000 ounces of gold and Bottle Creek has a recorded production of 39,000 ounces of gold.

The tenement was pegged following studies of previous work done by Delta Gold Limited in the mid 1990's showing the presence of the Bottle Creek Shear with convergence of the Mt Ida Fault. The Mt Ida Fault is a major lineament that has been the source of many gold discoveries along its 200 kilometer strike length.

### **Geological Setting**

The Mt Ida Project area is located in the central section of the Mt Ida Greenstone Belt, which has an extensive sequence of mafic and ultramafic rocks with interbedded (volcanogenic) sediments and felsic to intermediate volcanics. It is represented by a narrow linear belt that corresponds to the Norseman-Wiluna Greenstone Belt and covers an overall strike of approximately 150km.

*Jervois 'Mt Ida' tenement EL 29/861, outlined in red.*

## **Regional Structure**

The major structures in the Mt Ida area are closely associated with mineralisation. The Ida Fault intersects EL 29/861. Gold mineralisation is associated with a major shear zone along a zone of graphitic pelitic metasediments enveloped by ultramafic volcanic rocks. Gold occurs both within the altered, weathered shale horizon, and in minor quartz veins. The ore from Mt Ida is a sulfide which could potentially contain copper.

Shareholders wanting to know more of the background to the Mt Ida Gold Mine, there is a history of the Mt Ida mine on Wikipedia [http://en.wikipedia.org/wiki/Mount\\_Ida\\_Gold\\_Mine](http://en.wikipedia.org/wiki/Mount_Ida_Gold_Mine)

Exploration for potential gold mineralisation will begin in the second quarter of this year.

By order of the Board.

Duncan Pursell.  
Managing Director.
