HIGHLIGHTS

- Bankable Feasibility Study (“BFS”) for Idaho Cobalt Operations (“ICO”) on track for completion by end March 2020
- ICO Refinery Scoping Study underway in parallel with BFS
- Updated ICO Mineral Resource Estimate (“MRE”) increased contained cobalt in Measured Resource by over 20%
- New ICO MRE maximises cobalt grade using improved block design and modelling methods
- 3,125m diamond drilling completed at ICO, reconfirming Ram zone mineralisation as a high grade cobalt deposit with copper and gold credits, and extending hanging wall zones
- Initial results from 3,645m diamond drilling at Kilembe and Waragi, Uganda released after quarter end. Initial results expand prospective Kilembe areas (rock chip highlights include 41.0 g/t Au, 20.5 g/t Au, 10.3 g/t Au and 9.8 g/t Au) and improve understanding of mineralization
- In Uganda, initial Kilembe drill intercepts included 9.9m @ 1.37 g/t Au; Waragi 1.5m @ 0.23% Co – majority of assay results from this program yet to be returned
- Uganda exploration continues in Q1 2020
- On January 17, revised offer filed for Kabanga deposit, Tanzania
- A\$12.4 million cash as at 31 December 2019

PROJECT UPDATES

Idaho Cobalt Operations (“ICO”), United States

Since taking ownership of Idaho Cobalt Operations (“ICO”) in July 2019, Jervois aggressively drilled during the last six months of the year to better understand and de-risk the Mineral Resource Estimate (“MRE”) for the bankable feasibility study (“BFS”). The BFS remains on track to be completed by the end of the March quarter.

In December, Jervois released results from a successful infill and metallurgical programme of 3,125m (19 holes) of diamond drilling which included high grade cobalt (“Co”) intercepts up to 2.83% Co in the main Ram resource zone and hanging wall zones. Selected composite intervals included 4.6m @ 1.14% Co, 2.75% Cu, 1.01g/t Au; 3.5m @ 1.46% Co, 2.75% Cu, 1.83g/t Au, 5.4m @ 0.60% Co, 1.36% Cu, 0.74g/t Au and 3.7m @ 1.07% Co, 0.13% Cu, 0.69g/t Au. All holes targeting the previously modelled Ram resource intersected mineralisation, representing an increase of over 20% of all resource grade holes undertaken on the Ram deposit.

After quarter end, Jervois released the updated ICO Mineral Resource Estimate (“MRE”), being prepared to support the ICO BFS. The model was independently audited by CSA Global (an ERM Group company) ahead of its publication and imminent release to lenders and their technical advisers associated with ICO project financing.

The updated MRE used modified methodology to improve estimation using industry standard applications for narrow orebodies. This involved block rotation and adoption of a smaller cell size than previously used, as the previous MRE released 7 February 2018 was unrotated and used cell sizes not conducive to the narrow high-grade interzone intercepts found in the Main Ram zone. The updated ICO MRE increased contained Measured cobalt resources by 22% in comparison to earlier estimates. Total tonnage of Measured and Indicated contained cobalt resources (available for conversion under JORC into Reserves) also rose by 22%.

Table 1: 2020 Updated MRE for ICO using 0.15% Co cut-off

Category	Resource (M Tons)	Resource (M tonnes)	Co (%)	Co (M lbs)	Cu (%)	Cu (M lbs)	Au (oz/Ton)	Au (g/tonne)	Au (oz)
Measured ⁽¹⁾	2.92	2.65	0.45	26.2	0.59	34.4	0.013	0.45	38,000
Indicated ⁽¹⁾	2.85	2.59	0.42	23.8	0.80	45.7	0.018	0.62	51,000
M+I	5.77	5.24	0.44	50.1	0.69	80.1	0.015	0.53	89,000
Inferred ⁽²⁾	1.73	1.57	0.35	12.0	0.44	15.2	0.013	0.45	23,000

1. Mineral Resources are not Mineral Reserves and by definition do not have demonstrated economic viability. The Mineral Resources in this news release were estimated using the Canadian Institute of Mining, Metallurgy and Petroleum (CIM), CIM Standards on Mineral Resources and Reserves, Definitions and Guidelines prepared by the CIM Standing Committee on Reserve Definitions and adopted by CIM Council (2014).
2. This MRE includes Inferred Mineral Resources that are normally considered too speculative geologically to have economic considerations applied to them and must not be converted to a Mineral Reserve. It is reasonably expected that the majority of the Inferred Mineral Resources could be upgraded to Indicated Mineral Resources with continued exploration.
3. The Cobalt cut-off grade for inclusion in the resource is 0.15%, no consideration of copper or gold content was used in determination of cut-off grade.
4. Contained metal values and totals may differ due to rounding of figures.

The updated Resource has an adjusted cut-off of 0.15% Co, which Jervois considers to be more representative of future cobalt pricing, based on potential shortages of ethically sourced cobalt as battery demand increases and more in-line with current practice.

More detail on the ICO MRE update is available in the ASX Announcement dated 22 January 2020.

Metallurgical samples were taken from all Ram intercepts and are currently undergoing testwork at SGS Lakefield (Canada). Results will be fed into the BFS update and have provided concentrate samples for marketing under the split cobalt and copper concentrates regime currently in place.

In the December quarter, two holes were also extended to explore the footwall of the Ram deposit, with successful results for both step out exploration holes reported in October 2019. The Ram deposit resource remains open at depth and along strike offering opportunities for expansion. The initial footwall exploration results confirm an extension of the Blackbird mine horizons, resulting in the opportunity to further explore the Blacktail North extension zone on strike and dip. An extensive drill programme is planned during the US summer of 2020.

Jervois' confidence in the economic potential of the resource is growing as it generates more information for the updated ICO BFS. There is significant potential to operate at higher production rates than currently formalised under existing feasibility studies in an environmentally responsible manner, with the rotation of block cells part of this. This will require no modification to the existing ICO operating permits which currently cap ore production at 1,200 short tons per day ("stpd"). Similar to the audit role of CSA Global on the MRE, the Wood Group (who are also undertaking the ICO refinery scoping study) were appointed in Q4 2019 to undertake an audit of ICO operating permits ahead of appointment of lender Independent Engineers.

The BFS continues on schedule, with mine design now underway following completion of the updated MRE. Cut off grade trade offs and optimisation is currently underway, with detailed stope and access ramp design to follow. Metallurgical testwork at SGS Lakefield is progressing well with ore from the central zone of the Ram orebody used as representative of the first five years of production at various cobalt-copper-gold ratios. Flowsheet design for a 1,200stpd split cobalt-copper concentrator has been developed using conventional equipment: primary jaw crusher, SAG and ball mill, rougher and cleaner flotation, concentrate filtration and underground paste deposition and dry stack tailings. Particular focus by lead engineers DRA Global and M3 Engineering has been on leveraging the significant sunk capital invested on site to date. Physical concentrate samples continue to be despatched to customers for testing.

In December 2019, an ICO Information Memoranda ("IM") was sent to selected senior lenders. Indicative proposals have been received, and Jervois has engaged John Snelling, Executive Director of Magma Capital, a debt advisory firm, to assist the Board in the debt financing initiatives.

Ugandan Exploration Properties

Kilembe Area

Jervois holds six exploration licences (the “Kilembe Area Properties”) totaling around 700km², in the region of the old Falconbridge operated Kilembe copper-cobalt mine.

Jervois commenced diamond core drilling in late October. Drilling at the Kilembe Area Properties targeted surficial Au-Cu mineralization detected through earlier geochemical programmes. In total, 1,905m diamond drilling was completed in 17 holes drilled at the Kilembe Area Properties. Results received to date include highlights of:

- 9.9m @ 1.37 grams per tonne gold (“g/t Au”) from 29m – hole 19DDHS001
 - Including 0.45m @ 9.98 g/t Au; 0.1 percent copper (“% Cu”) from 34.05m
 - Including 1.9m @ 3.59 g/t Au from 37.0m
- 2.0m @ 723 grams per tonne silver (“g/t Ag”); 0.15% Cu from 127m – hole 19DDHS003
- 13.5m @ 0.52 g/t Au from 32.5m – hole 19DDHS005
- 1.8m @ 2.92 g/t Au from 50.7m – hole 19DDHS005
 - Including 0.8m @ 6.26 g/t Au; 0.36% Cu from 50.7m
- 1.0m @ 0.65 g/t Au; 1.66% Cu from 38.2m – hole 19DDHS012
- 2.0m @ 1.49 g/t Au from 54.0m – hole 19DDHS012

Further groundwork at the Kilembe Area Properties, including ground geophysics; soil and rock chip sampling, and prospecting have extended the strike length of mineralization at surface to over 6km, of which only 1.5km has been tested. Newly discovered rock chip sample highlights include: 41 g/t Au; 20.5 g/t Au; 10.3 g/t Au and 9.8 g/t Au. The majority of assay results from the initial drill programme have not yet been received by the Company. Drilling continues into Q1 2020.

Bujagali

Bujagali is an area in south central Uganda with excellent access and logistics, where Jervois has ELs covering approximately 1,350km².

Jervois completed Phase 1 drilling at Bujagali, which targeted the Waragi and Bombo anomalies. In total, five diamond holes were drilled at Bombo (totaling 1,325m), and an initial 12 diamond holes (or 2,225m) at Waragi. Jervois reported results from this programme in October 2019.

Phase 2 drilling targeted anomalies detected through earlier geochemical and geophysical (IP) programmes with an additional 10 diamond holes (1,740m) at the Waragi area. Highlights from partial results received include 1.5m @ 0.23% Co from 13.5m (hole 19DDHW011) and 1.0m @ 0.20% Co (hole 19DDHW010) from 13.4m. Results for holes 19DDHW015-019 are pending.

Nico Young Nickel-Cobalt Project, New South Wales, Australia

Negotiations continue with regard to an industrial partner committing to fund a BFS in exchange for partial off-take rights. Jervois remains confident that the lower capital and technical risk flowsheet of nickel-cobalt heap leaching in the eyes of potential customers, distinguishes Nico Young from its Australian laterite peers.

CORPORATE UPDATE

Liquidity and Cashflow

Total cash expenditure on exploration for the quarter was A\$3.2 million, which included A\$1.3 million relating to exploration activities in Uganda and A\$1.9 million in relation to Jervois's core project in Idaho, United States.

Jervois ended the quarter with A\$12.4 million in cash and no debt.

Kabanga Offer

In late December, the Government of Tanzania announced a pre-qualification tender for the development of the Kabanga nickel-cobalt deposit, in the Kagera Region of Tanzania. Jervois dispatched a team of executives and advisers to Tanzania in January to finalise its application, which was submitted on Friday 17 January, ahead of the deadline.

Jervois believes the Kabanga sulphide deposit, which has been the subject of about US\$250 million of expenditure and a definitive feasibility study ("DFS") by previous owners, to be the highest quality undeveloped nickel-cobalt deposit in the world, unmatched in scale and grade. As currently delineated, the JORC Resource represents 57Mt of easily floatable sulphide ore at 2.62% Ni, 0.20% Co and 0.35% Cu (Glencore Annual Report 2017, page 215). Kabanga's scale of mineral resource places the province squarely among the great nickel-cobalt basins in the world, comparable to Thompson Manitoba, Jinchuan and Voisey's Bay.

Jervois believes that it can finance, construct and operate in compliance with Tanzania's mining laws and regulations, including the domestic processing of concentrate. Jervois's revised offer to the Tanzanian Government meets, and in many respects, exceeds the requirements of the tender.

NON-CORE ASSETS

All Jervois's non-core assets are summarized on the Company's website, and the following progress occurred during the quarter:

Khartoum Tin Project, Herberton, Queensland Australia

Discussions on a potential sale of the project continued.

Arunta West JV (Jervois 49%)

During the quarter, the JV operator Norwest Minerals Ltd (ASX: NWM) continued a 12,000m RC drilling program to meet the next earn-in milestone. No assay results have been released to date. Jervois continues to monitor the progress of the non-contributing second stage earn-in.

ASX WAIVER INFORMATION

On 6 June 2019, the ASX granted a waiver to Jervois in respect of extending the period to 8 November 2023 in which it may issue new Jervois shares to the eCobalt option holders as part of the eCobalt transaction.

As at 31 December 2019, the following Jervois shares were issued in the quarter on exercise of eCobalt options and the following eCobalt options remain outstanding:

Jervois shares issued in the quarter on exercise of eCobalt options: Nil

eCobalt options remaining*

2,205,225	eCobalt options exercisable until 27 April 2020 at C\$0.12 each
2,714,250	eCobalt options exercisable until 6 September 2021 at C\$0.36 each
3,654,750	eCobalt options exercisable until 28 June 2022 at C\$0.71 each
288,750	eCobalt options exercisable until 5 October 2022 at C\$0.70 each
231,000	eCobalt options exercisable until 11 January 2023 at C\$1.16 each
165,000	eCobalt options exercisable until 12 March 2023 at C\$0.85 each
206,250	eCobalt options exercisable until 6 April 2023 at C\$0.84 each
4,191,000	eCobalt options exercisable until 28 June 2023 at C\$0.61 each
123,750	eCobalt options exercisable until 24 September 2023 at C\$0.50 each
1,980,000	eCobalt options exercisable until 1 October 2023 at C\$0.53 each
<u>15,759,975</u>	

*The number of options represent the number of Jervois shares that will be issued on exercise. The exercise price represents the price to be paid for the Jervois shares when issued.

Competent Person's Statement

The information in this release that relates to Mineral Exploration is based on information compiled by David Selfe who is full time employee of the company and a Fellow of the Australasian Institute of Mining and Metallurgy and Dean Besserer, P.Geol. who is the GM Exploration for the Company and a member of The Association of Professional Engineers and Geoscientists of Alberta. The information in this release that relates to Mineral Resource Estimates is based on information compiled by David Selfe. Both David Selfe and Dean Besserer have sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and to the activity which they are undertaking to qualify as a Competent Person as defined in the 2012 Edition of the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. David Selfe and Dean Besserer consent to the inclusion in the release of the matters based on their information in the form and context in which it appears.

Disclosure required for TSX-V Regulations

Qualified Person's Statement

The technical content of this news release has been reviewed and approved by Dean Besserer, P.Geol., who is the GM Exploration for the Company and a Qualified Person as defined by National Instrument 43-101. The technical content as it relates to the Mineral Resource Estimate has been reviewed and approved by Scott Zelligan, P.Geol, who is an Independent consultant to the Company and a Qualified Person as defined by National Instrument 43-101.

Neither TSX Venture Exchange nor its Regulation Services Provider (as that term is defined in policies of the TSX Venture Exchange) accepts responsibility for the adequacy or accuracy of this release.

This news release may contain certain "Forward-Looking Statements" within the meaning of the United States Private Securities Litigation Reform Act of 1995 and applicable Canadian securities laws. When used in this news release, the words "anticipate", "believe", "estimate", "expect", "target", "plan", "forecast", "may", "schedule" and other similar words or expressions identify forward-looking statements or information. These forward-looking statements or information may relate to exploration work to be undertaken at ICO or in Uganda, preparation of studies on the ICO, the reliability of third party information, and certain other factors or information. Such statements represent the Company's current views with respect to future events and are necessarily based upon a number of assumptions and

estimates that, while considered reasonable by the Company, are inherently subject to significant business, economic, competitive, political and social risks, contingencies and uncertainties. Many factors, both known and unknown, could cause results, performance or achievements to be materially different from the results, performance or achievements that are or may be expressed or implied by such forward-looking statements. The Company does not intend, and does not assume any obligation, to update these forward-looking statements or information to reflect changes in assumptions or changes in circumstances or any other events affecting such statements and information other than as required by applicable laws, rules and regulations.
